

Operation Instructions

Thank you for purchasing the GROW1 Digital Nutrient Scale! Please Read all operating instructions carefully before use to ensure you receive the best performance possible.

Operation

- 1. For proper readings, place the scale on a flat surface.
- 2. To turn the scale on, press the ON/OFF button.
- 3. Wait until the screen displays 0.0.
- 4. Place object/s or nutrients on the scale's weighing surface.
- Press the MODE button to switch between measuring units. (Available measuring units: grams (g), ounces (oz), troy ounces (ozt), pennyweight (dwt)
- 6. To use the Tare function, press the ON/OFF button once.
- To turn the scale off, press and hold the ON/OFF button for 5 seconds.

Calibration

- 1. Turn on the scale using the ON/OFF button.
- Press and hold the MODE button until the screen display
 CAL, then release the MODE button.
- Press the MODE button again and the screen will display followed by the required calibration weight value. (ex. 1000.0g)
- 4. Place the required calibration weight on the center of the scale's weighing surface. This must be an object that has a confirmed weight that is the same as the calibration walks.
- The screen will display PASS and then return to the default weighing mode.
- 6. Calibration is now complete.

Warning

- Never overload the scale with more than the recommended maximum weight.
- Avoid exposure to extreme hot or cold temperatures and high humidity. For best results, use at a room temperature state.
- Give the scale sufficient warm-up time to receive proper readings. (30-60 seconds)
- Store/use the scale in a clean and stable environment void of dust, dirt, moisture, vibrations, and other disruptive electronics.
- Always handle the scale with extreme care and avoid dropping, shaking, or otherwise damaging the scale
- Only operate the scale on a stable, flat, vibration free surface to receive the most accurate readings.
