

Green House Bio Feeding

Green House Bio Feeding

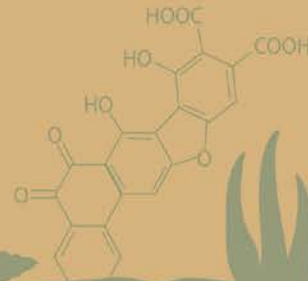

- All-in-one bio fertilizer in powder form
- Mixed with the substrate or applied as top dressing
- Nutrients are released during 8 weeks
- Contains 70% organic matter and 30% OMRI listed mineral sources
- Provides NPK, Calcium, Magnesium & micronutrients
- Contains beneficial fungus and bacteria which promotes the microbial activity in the substrate
- Improves the soil structure, aeration of the soil and root development

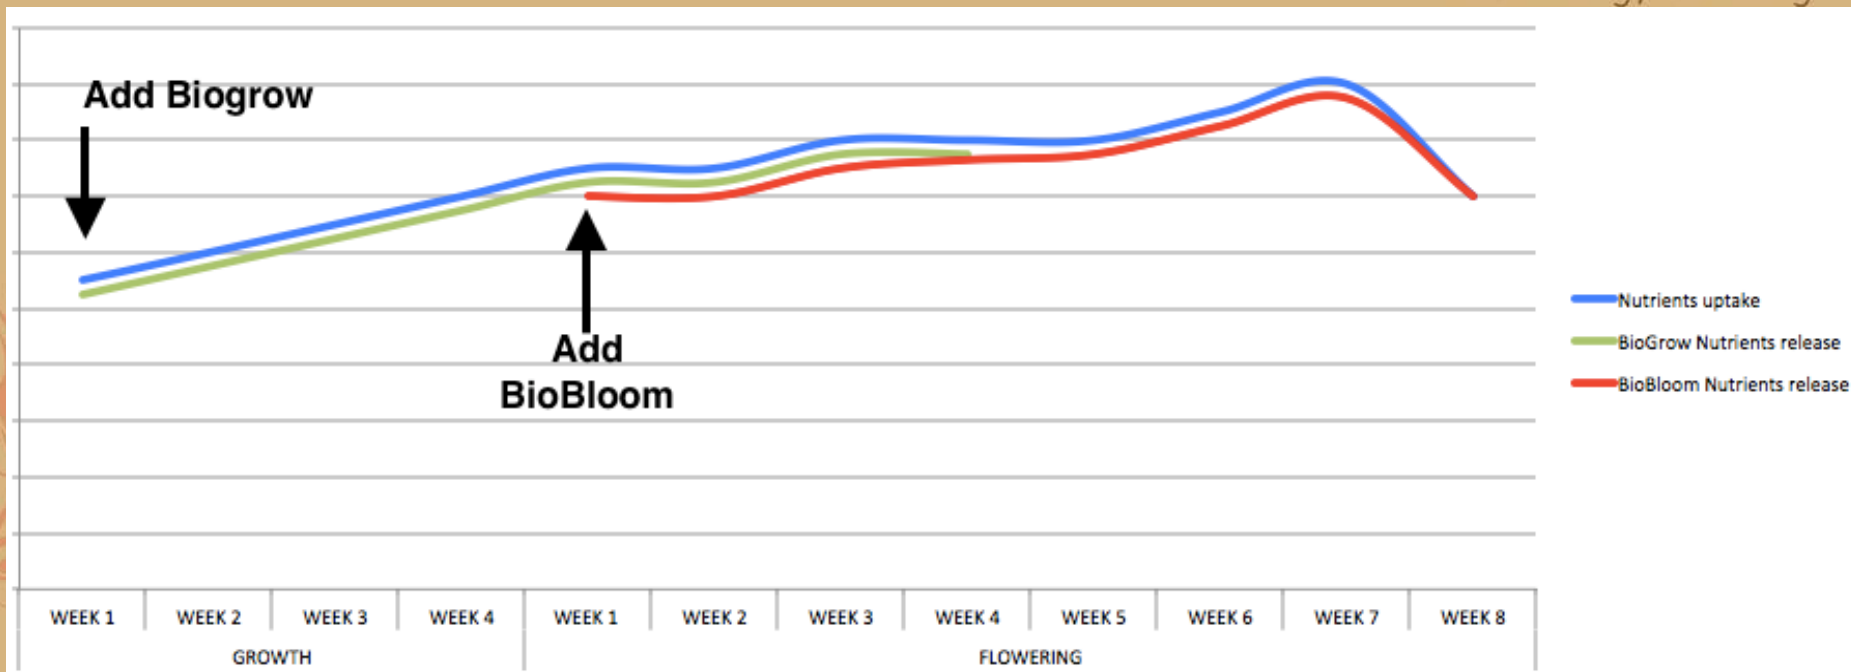

How to use

BioGrow and BioBloom:

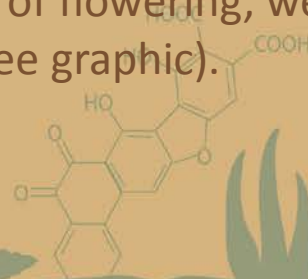

- Mix with substrate during transplant or apply as top dressing
- The bio fertilizer is activated once it gets in contact with water
 - Beneficial fungi and bacteria will start to break down the nutrients and make them available for the plant
- Dosage:
 - 4 oz per 10 gallons of substrate (in pots with soil EC: 1.0)
 - 8 oz per 10 gallons of substrate (In pots with coco or blend of coco+peat EC<1.0)
 - 4,25 – 8,00oz per 10 square feet

How to use

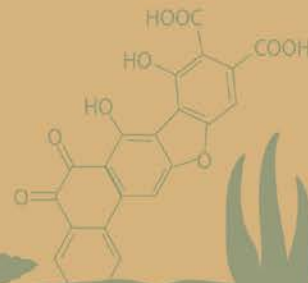

BioGrow and BioBloom are releasing nutrients during 8 weeks. To ensure sufficient amounts of nitrogen during the first 4 weeks of flowering, we recommend to apply BioGrow 4 weeks before adding BioBloom (see graphic).

Green House Bio Feeding

Enhancer:

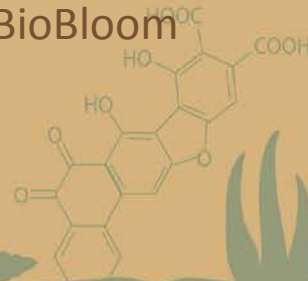

- Plant bioprotector
 - Increases plant vitality
 - Promotes healthy roots
 - Healthy plants = higher yield
- Blend of humic acid and seaweed extract (*Ascophyllum nodosum*)
 - Improves germination of seeds
 - Stimulates development of roots and microorganisms
- Contains *Trichoderma harzianum* and *Bacillus subtilis*
 - Protects the plant from harmful fungi and pathogenic bacteria (e.g.: *Phythium*, *Fusarium*, etc.)

How to use

Enhancer:

- Mix with water
 - Apply every 15 days
 - Dosage when watering:
 - 0.67oz 1.34oz per 10 gallons of water
 - Dosage for foliar application:
 - 0.3oz .67oz per 10 gallons of water → prevents powdery mildew (PM)
 - Dosage for seed germination and rooting of clones:
 - 0.67oz 1.34oz per 10 gallons of water
- Use 10 days after applying BioGrow or BioBloom
