\* For additional weeks of Grow repeat week 3 \* For additional weeks of Bloom repeat week 4 \*\*Optional: When growing in Coco or with RO water usage recommended. \*\*\*Pre-agitate/dilute Mendocino Honey in separate container before adding to reservoir.

### RECIRCULATING TIPS:

- Maintain pH range 5.6-6.5 and aerate nutrient solution.
- Add Micro first to reservoir for best results.
- Nutrient Reservoir solution temperature should be below 75 degrees F (23 C).
- Change Nutrient solution every 7-10 days and add fresh water between water changes.
- Use Hawaiian Bud or Hula Bloom, not both at same time.
- Pre-agitate/dilute Honey in separate container before adding to reservoir.

### OTHER HELPFUL TIPS

- Hot environments cause more evaporation top off with fresh water
- Do not mix concentrates together dilute and premix then add to reservoir
- If plants show symptoms of stress or color irregularities flush system with fresh water and recharge nutrients.
- Check EC before feeding, add nutrients per recommendation until correct. EC is achieved
- Over feeding nutrients can burn plants
