

Soil Feeding Schedule

Use FoxFarm Ocean Forest® Potting Soil when transplanting seedlings into larger containers. We recommend a two gallon size or larger. **FOR BEST RESULTS:** Feed with every other watering. Maintain a pH of 6.3 to 6.8 to prevent nutrient lock up and reduce stress on plants. Never mix pure concentrates together, always add water first.

Should plants show signs of stress or color irregularities, flush your system with SledgeHammer® combined with Boomerang®. When using coco-based mediums flush three times during the growing season as coco has a tendency to retain unwanted salt residue more than peat-based soils. Always remember to adjust your pH.

TEASPOONS PER GALLON OF WATER

FEED TWO TIMES PER WEEK
