Cal-Mino™

Cal-Mino™ is a water-soluble calcium fertilizer derived from soy protein hydrolysate and calcium carbonate. It is a fine, free-flowing, hygroscopic, spray-dried powder that contains amino acids and short polypeptides derived from enzymatic hydrolysis of soybeans. It is a low-sodium, low-nitrate, sprayable concentrate. Use as part of a complete fertilizer program to address calcium deficiencies in the crop. It can be used through the entire crop life cycle to correct nutrient deficiency and feed the soil biology.

8-0-0, 10% Calcium

Benefits

- Provides an available organic source of calcium to the plant
- Provides an excellent food source for microbial population
- Helps crops recover quickly from stress due to inefficient management
- Improves overall plant nutrition
- Can be used immediately to address calcium deficiencies
- Optimizes plant performance and improves soil conditions for improved crop establishment

Application Rates

Soil/Soilless/Hydroponics	1/2-1 tbsp/gal
Foliar Sprays	2-10 lbs/acre
Soil Fertility	2-10 lbs/acre
Lawn & Garden	0.5-2 oz/gal

Cal-Mino™ can be applied to all crops including; trees, vines, ornamentals, small fruits, vegetables, row crops, feed crops, forage, and pasture. It can be applied by in-furrow, side dress, spray, and fertigation. Consult with your agronomist for the correct number of applications.

Physical Properties

Form	powder
Color	off-white
Odor	non-distinctive
Solubility	100% water soluble
pH	6-7

Guaranteed Analysis

Component	Analysis
Water Soluble Nitrogen	8%
Calcium	10%

These two pepper plants were grown over the summer using standard miracle-gro fertilizer. The plant on the right was treated with 3 applications of Cal-Mino over the course of 3 months. The plant on the left was untreated and has already started to senesce (die).
