

# Mag-Amped

Cutting Edge Solutions Mag-Amped is our flagship bioavailable magnesium product. Mag-Amped is capable of delivering the required dose, to both correct a deficiency and prevent one. Our 3-Part Base lineup was designed with ample amounts of calcium and magnesium, but certain plant phenotypes need just a bit more. We did not combine our calcium and magnesium because you don't always need additional amounts of both. If your plant is a magnesium lover, but already has adequate amounts of calcium, you will create additional problems, by using a Cal-Mag combination product trying to correct a magnesium only deficiency! Mag-Amped was formulated with the addition of bioavailable sulfur; we found the deficiencies and plant demands to be related.

Mag-Amped contains an organic wetting agent, making it a powerful addition to any foliar feeding program. Foliar feeding is an excellent way to rapidly correct a plant deficiency and prevent one!

Why should I foliar feed?

- Foliar fertilization of trace nutrients not only provides faster uptake but also much better utilization.
- The addition of foliar fertilizers to liquid fertilizers applied for plant protection, leads to faster plant protection and nutrient utilization.

The secret to success is yours.
