Mondi Mini Greenhouse **THERMO-HYGROMETER** TEMPERATURE AND HUMIDITY METER

You've probably heard the phrase "*Children are the future,*" but if you're a serious grower you know your future is seedlings and cuttings. The propagation portion of a plant's life cycle is arguably the most important, as it sets the tone for the rest of a plant's growth. Any mistakes during this time can be extremely costly and are simply unacceptable.

PREVENT WILTING

PREVENT DISEASE

PREVENT DEATH

Keeping your seedlings and cuttings at the improper temperature and humidity can have catastrophic results such as wilting, disease and even death. All of these scenarios mean a loss of time and money and can completely ruin your growing cycle. Do you want to throw out hundreds of dollars of dead or diseased plants? Do you want to experience failure? Of course you don't.

Guarantee yourself success with the new Mondi Mini Greenhouse Thermo-Hygrometer.

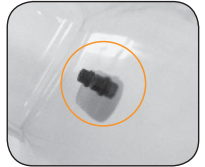

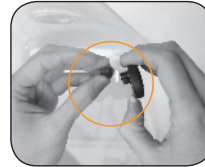

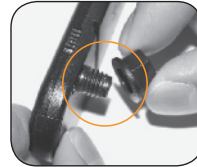

This revolutionary product mounts anywhere on your Mondi Mini Greenhouse and reads temperature and humidity inside the dome. In combination with Mondi Easy Vents, it ensures plants get the start they need by providing growers with the essential real-time information necessary to produce large quantities of healthy plants. If you want your seedlings and cuttings to reach their full potential then you simply must have the Mondi Mini Greenhouse Thermo-Hygrometer.
