

Plant-Amp

Cutting Edge Solutions Plant-Amp is our flagship bioavailable calcium product. Plant-Amp is capable of delivering the required dose, to both correct a deficiency and prevent one. Our 3-Part Base lineup was designed with ample amounts of calcium and magnesium, but certain plant phenotypes need just a bit more. We did not combine our calcium and magnesium because you don't always need additional amounts of both. If your plant is a calcium lover, but already has adequate amounts of magnesium, you will create additional problems, by using a Cal-Mag combination product trying to correct a calcium only deficiency!

Plant-Amp can be combined with Mag-Amped to create a custom foliar bioavailable Cal-Mag solution. Our Cutting Edge Solutions Mag-Amped contains an organic wetting agent to insure uniform coverage during foliar application. Foliar feeding is an excellent way to rapidly correct a plant deficiency and prevent one!

Why should I foliar feed?

- Foliar fertilization of trace nutrients not only provides faster uptake, but also much better nutrient utilization.
- The addition of proactive foliar feeding schedule, to a traditional fertigation plan, leads to **faster** plant protection and nutrient utilization.

The secret to success is yours.
