Zinc (Zn) 0.2%

0.2% Chelated Zinc (Zn)

Derived from potassium thiosulfate, copper IDS, manganese EDTA, manganese IDS, zinc EDTA, zinc IDS and boric acid.

Application Instructions

BackSpin™ can be applied as a foliar or soil application to corn and soybean at a rate of 2 to 8 quarts per acre. Applications should be made at planting (if applicable) and then every 10 to 14 days throughout the growing season, as needed.

BackSpin™

About BackSpin

BackSpin™ is a chlorine-free solution of potassium thiosulfate, KaPre® Spectra-OC and Krystal Klear® AgraMix III chelated micronutrients. It contains 17% potassium and 11% sulfur derived from thiosulfate (KTS), high-carbon humic acids, and a balanced blend of chelated micronutrients.

Ideal for soil side-dress applications, foliar sprays, and irrigation system injections. BackSpin™ is compatible with most fertilizers and chemicals and can be tank mixed with other fertilizer solutions in pre-emergent and post-emergent applications.

Benefits of BackSpin

- Safe on virtually all crops
- Delivers readily absorbable potassium (K) and sulfur (S)
- Improves soil quality with high-carbon organic acids
- Supports crop health with a balanced blend of chelated micronutrients
- Helps complex phosphorus for extended availability
- Provides a beneficial environment for soil microbes
- Enhances nutrient solubility, availability, and plant uptake
- Improves cation exchange in soil solutions
- Supports populations of beneficial soil bacteria and fungi
- Protects phosphate fertilizers from binding up into unavailable soil minerals
